Errata proposal - Read/Write ordering

Christian Simmendinger

November 30, 2016

1 Read/Write ordering

In order to provide improved scalability and better hardware support the extendend functions `gaspi_write_notify`, `gaspi_write_list_notify` `gaspi_read_notify` and `gaspi_read_list_notify` can be considered as unordered relative to each other and also as unordered relative to the function calls `gaspi_read` and `gaspi_write`. This holds true, even if the corresponding communication requests are issued to the same queue.

2 Additional (necessary) Changes to the Standard

Replace "preceding" communication requests with "other" communication requests wherever this errata applies..
